

Individual Reflection Week1 - Deaa

What do I want to learn or understand better?

I aim to learn the process of building a software product in an efficient way as well as understand agile development and SCRUM. Communication within the group is very important to reach my goal so it's a thing to improve.

How can I help someone else, or the entire team, to learn something new?

We have briefly discussed about creating a web application using JavaScript, typescript, react etc. I'm familiar with these languages/frameworks so I will try to support the group when they face bugs in the developing process.

What is my contribution towards the team's use of SCRUM?

Not much until now since we have not started with SCRUM.

What is my contribution towards the teams' deliveries?

uncertain now since we did not do much in the first week.
