

What I want to learn or understand better?

Last sprint I tried to learn react component life cycle and it went very well. For next sprint we need to create some filters for the application like exercises and recipes. I never did that before so I need to watch some videos on YouTube to get an idea how I can implement this functionality in a good way.

How can I help someone else or the entire team to learn something new?

The first step is to give the person the feeling that he/she is welcome to ask questions. It's a thing that I need to feel when someone teach me or try to help me. And now at the end of the course I have learned that the best way to learn any thing is by doing it. So, give a demo or do some painting to give a visualization

What is my contribution towards the team's use of scrum?

Attended all the meetings and were active in them. Used Trello and was there when someone needed help.

What is my contribution towards the team's deliveries?

I did my tasks and my part of the team reflection.
