

## **DoD, Definition of Done**

A User Story is considered done when its acceptance criteria are met, it has been reviewed by at least one other team member. You don't commit your own changes, let another team member look through the code and accept the push in the VCS. It also has to be documented (in some way, JSDoc??), it has been tested( also in some capacity, might depend on what you're doing, jest?), it follows the agreed upon codestyle outlined in the codestyle document and it follows best practice when applicable, it has been merged with the main branch with no errors in the VCS used.

The acceptance criterias are met through implementing tasks and those tasks are considered done when they follow the criteria outlined in this document

Criteria for a user story to be considered done

- Acceptance Criteria are met
- Code Review has been performed by at least one other team member
- Documented in some capacity
- Tested in some capacity
- Follows the code style, outlined in the code style document
- Follows best practice when applicable
- Merged with no errors to the main branch in the VCS, by another team member, this is the last thing done
- Update the Scrum board
