

What do I want to learn or understand better?

What I want to learn is how to prioritize the user stories as well as how to estimate difficulty level and the time it needs to finish them. As well as making the user stories independent. Scrum and Agile is still a thing to improve.

How can I help someone else, or the entire team, to learn something new?

This week I did share my screen to show the team how to work with react like start the application, create a button and to navigate around the files in Visual Studio Code. Next week I'm the SCRUM master and to do my role I need to watch some SCRUM videos on internet and to have deep into this area to lead the team to reach our goal for the sprint.

What is my contribution towards the team's use of scrum?

I participated in planning next week sprint as well as some ideas which makes the project implementation better like giving every user story a difficulty grade to know how much effort every member put into the project and to estimate the time each user story need to be done.

What is my contribution towards the teams' deliveries?

I did 2 user stories this week, I created the home page with header as well as exercise page with 3 exercises. I participated in the meetings and tried to give feedback when it needed.
