What do i want to learn or understand better?

I want to learn how to receive data from an API since we are going to use it in sprint 4 as well as gain more knowledge about agile and SCRUM.

How can I help someone else or the entire team to learn something new?

Pair programming seems to be efficient. If I find a bug in the code, I try to explain what the problem is as well as the solution if I know how to fix it. Give the team members the feeling that they can ask me for help when they need.

What is my contribution towards the team's use of scrum?

I tried to do more user stories when I was done with mine. I was scrum master this sprint. Being active in the meetings and ask questions so that everything is clear without misunderstanding.

What is my contribution towards the teams' deliveries?

I did my user story and I was part of all the meetings.
